

# SHERIN DAHER

Technical Marketing Engineer | Developer Documentation & Documentation Strategy | AI Infrastructure  
Haifa, Israel | +972-526337084 | sherindahe1@gmail.com | linkedin.com/in/sherin-daher-45520815b

---

## PROFESSIONAL SUMMARY

---

Technical documentation and developer experience leader with 15+ years of experience building documentation systems for complex developer and enterprise technologies. Currently lead documentation strategy for NVIDIA Run:ai at the intersection of AI infrastructure, open source, developer documentation, and engineering. Experienced in building and transforming documentation functions, docs-as-code infrastructure, developer-focused information architecture, contribution models, governance, API documentation, and release workflows. Most recently focused on MCP, Agent Skills, and agent-assisted documentation workflows that enable engineers and external contributors to maintain documentation at scale.

## CORE COMPETENCIES

---

Developer Documentation | Documentation Strategy | Information Architecture | API Documentation |  
Developer Experience | Docs-as-Code | Git/GitHub | CI/CD Documentation Workflows | Open Source  
| AI Infrastructure | MCP | Agent Skills | Documentation Governance | Contributor Enablement

## PROFESSIONAL EXPERIENCE

---

### NVIDIA - Run:ai

- Technical Marketing Engineer (Previously Senior Technical Writer) Nov 2024 - Present
- Lead documentation strategy and developer experience for NVIDIA Run:ai, an AI infrastructure and Kubernetes-based workload orchestration platform. As the sole documentation owner, partner closely with Engineering, Product Management, UX, and other cross-functional teams to define documentation architecture, tooling, standards, contribution workflows, and release strategy.
- Own the end-to-end documentation strategy and delivery for Run:ai, spanning developer and API documentation, installation and administration, concepts, technical references, release content, and user workflows.
- Defined the documentation strategy for Run:ai's transition to open source, assessing existing documentation against OSS and developer personas, identifying content and experience gaps, and developing a phased P0/P1/P2 roadmap for developers and external contributors.
- Designed the developer documentation architecture for the OSS platform, defining how GitHub READMEs, architecture and service documentation, concepts, API/CLI references, and other technical content work together to support developer journeys.
- Transformed the OSS documentation workflow to support agent-assisted contributions by introducing reusable Agent Skills into the product repository, enabling internal engineers and external contributors to use AI agents to create and maintain documentation while following defined standards, terminology, and workflows.
- Partnered with Engineering and Product from early development of the Run:ai MCP server, helping determine supported API operations and use cases, validating API coverage and behavior, identifying technical inaccuracies and gaps, and serving as a primary reviewer as the product and developer experience matured.
- Led the migration of Run:ai documentation to a docs-as-code model integrated with the product monorepo, working hands-on with Git/GitHub, pull-request workflows, documentation reviews, CI-based previews, and automated publishing.

- Defined information architecture, documentation standards, terminology, contribution and review processes, and release workflows, enabling more consistent documentation and closer integration between documentation and engineering development.
- Partner with Product Management and Engineering throughout feature development to validate technical behavior and workflows, identify documentation and usability gaps, improve product terminology, and ensure technically accurate documentation across releases.

## **Habana Labs (Intel)**

- Senior Technical Writer / Team Lead Apr 2020 - Nov 2024
- Joined as the first technical writer to establish the documentation function for Habana's AI software platform, building the documentation infrastructure, processes, standards, and team needed to support a rapidly evolving developer-focused product.
- Built the documentation function from the ground up, establishing documentation architecture, authoring and publishing workflows, standards, review processes, and release practices across the organization.
- Evaluated and implemented a docs-as-code toolchain, migrating documentation from Microsoft Word to Sphinx and Read the Docs and establishing source-controlled workflows that enabled more scalable collaboration with engineering.
- Partnered closely with R&D, Product Management, Application Engineering, and Marketing on documentation spanning AI software installation and configuration, APIs, PyTorch training and inference, Docker and Kubernetes environments, distributed workloads, debugging and optimization, and other developer workflows.
- Restructured the documentation and information architecture around user workflows, improving how developers and technical users navigated a complex documentation set spanning software, hardware, APIs, orchestration, and AI development.
- Established contributor workflows and trained engineers and other technical contributors to work with the documentation toolchain and contribute content effectively.
- Recruited and trained two technical writers as the documentation function expanded, providing technical and editorial guidance while maintaining documentation quality and consistency.
- Managed documentation delivery across a six-week software release cadence, coordinating documentation requirements and priorities with engineering and product development.

## **Zerto**

- Senior Technical Writer Jul 2018 - Apr 2020
- Developed documentation for public-cloud features and complex technical workflows, partnering directly with Engineering and QA to understand, validate, and communicate product behavior.
- Created and maintained API reference documentation, working hands-on with Postman to test API calls and validate requests, responses, and documented product behavior.
- Improved documentation usability, information architecture, tooling, and publishing workflows, including automation initiatives and migration from Adobe FrameMaker to MadCap Flare.

## **Mellanox Technologies**

### **Senior Technical Writer, May 2014 - Jul 2018 | Technical Writer, Oct 2010 - Apr 2014**

- Developed documentation for complex networking, storage, SoC, FPGA, adapter, and integrated-circuit technologies, working closely with software and hardware engineers, architects, Product Management, and Business Development.
- Created technical guides, architecture and design specifications, developer and community documentation, and release content for highly technical audiences.
- Planned, developed, and maintained a 1,600-page programming manual and mentored a junior technical writer as documentation responsibilities expanded.

## TECHNOLOGIES

---

GitHub | Git | Markdown | Sphinx | Read the Docs | Fern | GitBook | MadCap Flare |  
Postman | OpenAPI | HTML | CSS | Confluence | Jira | SharePoint | Microsoft Office

## EDUCATION

---

M.A., English Literature - University of Haifa

B.A., English Language and Literature - Oranim Academic College of Education
